k. *Project Description:***Existing Project Facilities and Operation**

The project is located at the existing 115-foot-high, 1,525-foot-long Wrightsville Dam which is owned, operated, and maintained by the state of Vermont for flood control but also contains facilities utilized by WEC for hydropower generation. The licensed project consists of the following constructed facilities: A 445-foot-long, 5-foot-diameter steel aboveground penstock emerging from the base of the dam that conveys water to a 1,320-square-foot partially-buried project powerhouse containing three fixed blade turbines with rated capacities of 96, 259, and 578-kilowatts (kW) for a total installed capacity of 933 kW; a 750 square-foot substation located adjacent to the powerhouse that steps up the voltage from 4.16 kilovolts (kV) to 12.5 kV; a 450-foot-long, 12.5-kV transmission line; and appurtenant facilities.

Water from Wrightsville Reservoir enters an existing non-project intake structure at the dam containing two separate intake chambers: A “hydropower bay” located at an elevation of 631 feet and an overflow bay located at an elevation of 635 feet. Water entering the hydropower bay passes through trashracks, a headgate, and non-project conveyance tunnel within the dam and is conveyed to the powerhouse through the project penstock before re-entering the North Branch Winooski River approximately 400 feet downstream of the dam creating a 400-foot bypassed reach. Water entering the overflow bay passes
