However, an individual loan record in automated format may only be retrieved by name or loan number.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Records in this system are retained and disposed of in accordance with the schedule approved by the Archivist of the United States, Records Control Schedule VB-1, Part II, 2-23; 2-3; 2-24.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Access to VA working spaces and record file storage areas is restricted to VA employees on a "need to know" basis. Generally, VA file areas are locked after normal duty hours and are protected from outside access by the Federal Protective Service or other VA security personnel. Loan and property security instruments are stored in separate fire-resistant locked files. VA employee loan file records and other files which, in the opinion of VA, are, or may become, sensitive are stored in separate locked files. Access to electronic VA information is managed through identity and access manager controls. Information in the system may be accessed from authorized terminals in the VA network. Terminal locations include VA Central Office and regional offices. Access to terminals is by authorization controlled by the site security officer. The security officer is assigned responsibility for privacy-security measures, especially for review of violations logs, information logs and control of password and badge readers and audible alarms. Electronic keyboard

locks are activated on security errors. Also, beginning in 1986, sensitive files were established using the social security numbers of the VA Veterans Benefits Administration employees and other prominent individuals to prevent indiscriminate access to their automated records.

Access to programs is controlled at three levels: Programming, auditing, and operations. Access to data processing centers is generally restricted to center employees, custodial personnel, Federal Protective Service and other security personnel. Access to computer rooms is restricted to authorized operational personnel through electronic locking devices.

LGY operates at VA's FedRAMP authorized Amazon Web Services (AWS) GovCloud data centers. AWS data centers are highly restricted for both physical and logical access. Physical access controls are inherited from AWS to all GovCloud customers. VA's AWS environment is logically restricted to support VA operations only. Further, LGY's AWS environment is logically restricted to LGY authorized operations personnel whose duties require management of LGY systems.

LGY follows VA's data security requirements to protect VA, LGY, and Veteran's data at rest. LGY's servers utilize FIPS 140-2 compliant encryption methods to protect the confidentiality of data at rest at the operating system (OS) level and for data storage. VA authorized baselines are used to build LGY servers and are configured with FIPS mode enabled by default. Similarly, LGY virtual storage devices such as AWS Elastic Block Store Volumes (EBS) and S3 are encrypted by default using Amazon Key Management Service (KMS) for protection of data at rest. These methods ensure that LGY data is protected in real-time as it's stored within the LGY security boundary. The S3 environment stores the LGY electronic data indefinitely till LGY Central Office provides disposition requirements.
