The purpose of this information collection is to obtain socioeconomic information on this sanctuary. The GRNMS has recently revised its management plan, and two issues emerged as top priorities leading to efforts to change management strategies and regulations: (1) Prohibition of spear fishing and (2) research only area. Information was obtained to assess the potential socioeconomic impacts of the prohibition of spear fishing and research only area alternatives. The preferred alternatives have been chosen and the regulatory process to implement the regulations is underway. The study

involves surveys of recreational user groups, which are potentially impacted by the regulations, to assess their knowledge, attitudes and perceptions of the management strategies and regulations and how they were actually impacted post implementation, and to guide education and outreach efforts.

Information will be collected on spatial use for all user groups to assess the extent of potential displacement of activity from the research only area alternative.

For business operations, costs and earnings will be obtained to assess the impact of regulatory alternatives on business profits. Socioeconomic/demographic information on owners/operators and number of employees and family members of owners/operators will also be obtained.

For members of households that participate in recreational fishing or recreational SCUBA diving, information will be collected on socioeconomic/demographic profiles, spending associated with their activity, economic user value associated with their activity, and knowledge, attitudes and perceptions about GRNMS management strategies and regulations.

*Affected Public:* Business or other for-profit organizations; individuals or households.
