

have no archeological classification and cannot be associated with any present-day Indian tribe.

In the 1970s, human remains representing, at minimum, one individual were recovered from an undesignated location in Itasca County, MN. The archeological recovery took place during the Pokegama Survey #66 conducted by archeologist Richard Lane, from St. Cloud State University. The human remains were maintained at St. Cloud State University (Acc. #106) until 2006. In 2006, the human remains were transferred to the MIAC (H418–3). No known individuals were identified. No associated funerary objects are present.

The condition of the remains and related material recovered during the archeological survey, which included ceramic and lithic habitation materials, suggests a pre-contact American Indian context. These human remains have no archeological classification and cannot be associated with any present-day Indian tribe.

Determinations Made by the Minnesota Indian Affairs Council

Officials of the MIAC have determined that:

- Based on non-destructive physical analysis and catalogue records, the human remains are Native American.
- Pursuant to 25 U.S.C. 3001(2), a relationship of shared group identity cannot be reasonably traced between the Native American human remains and any present-day Indian tribe.
- According to final judgments of the Indian Claims Commission, the land from which the Native American human remains were removed is the aboriginal land of The Tribes.
- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice represent the physical remains of two individuals of Native American ancestry.
- Pursuant to 43 CFR 10.11(c)(1), the disposition of the human remains is to The Tribes.

History and Description of the Remains

At an unknown date, human remains representing, at minimum, two individuals were removed by a private citizen from an undesignated site on the Kettle River, near Hinckley in Pine County, MN. Some years later, a relative brought the human remains to the cultural resource department of the Shakopee Mdewakanton Dakota Community, who transferred the human remains to the Minnesota Office of the State Archaeologist in 2001. In 2002, the human remains were transferred to the MIAC (H386). No known individuals were identified. The one associated funerary object is a piece of birch bark.

Birch bark is found in both pre-contact and post-contact burial contexts in Minnesota. It is a known traditional American Indian burial practice to wrap human remains in birch bark as part of the internment process. These human remains have no temporal context and no archeological classification and cannot be associated with any present-day Indian tribe.
