DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA-03-14197; Notice 1]

Shelby American, Inc.; Application for Temporary Exemption From Federal Motor Vehicle Safety Standard No. 208

Shelby American, Inc., of Las Vegas, Nevada ("Shelby"), on behalf of its wholly-owned subsidiary Shelby Series One, Inc., has applied for a three-year exemption from the automatic restraint provisions of Federal Motor Vehicle Safety Standard No. 208 *Occupant Crash Protection* (S4.1.5.3). The basis of the application is that compliance would cause substantial economic hardship to a manufacturer that has tried in good faith to comply with the standard.

This notice of receipt of the petition is published in accordance with agency regulations on the subject and does not represent any judgment by the agency about the merits of the petition.

Shelby is a Texas corporation, privately held and owned by Carroll H. Shelby and Venture Holdings, Inc. Its current business activities are

conducted by four wholly-owned subsidiaries. The first of these subsidiaries is Shelby Series One, Inc., the unit that produces the passenger cars which are the subject of this application for a temporary exemption. The current vehicle is designated Series 1 and its successor will be Series 2. The second Shelby subsidiary is Shelby CSX4000, Inc., which produces "component vehicles" sold without engine or transmission. The third subsidiary is Shelby Original 427 S/Cs, Inc., whose business is to assemble automobiles "from certain new old stock parts surviving from the original 1965 Shelby Cobra production run * * * supplemented by newly manufactured parts utilizing original tooling." The fourth subsidiary, Shelby Performance, Inc., does not assemble vehicles but offers aftermarket products.

Shelby informed us that, as of the date of its petition, July 29, 2002, it had produced a total of 256 Series 1 vehicles, and "one or two" vehicles annually assembled from 1965 stock parts. These vehicles "are sold for off-road (racing) or museum display purposes only, and under current regulatory restrictions may not be licensed for street use." Shelby has also produced something over 270 "component vehicles," without power trains, whose manufacture is completed by an entity other than Shelby. With respect to these vehicles, Shelby invites prospective purchasers to "call for the name of a Recognized Shelby American Dealer who can build one for you."

The Series 1 and Series 2 are two-passenger convertible passenger cars. The Series 2 "is a face lifted version of the Series 1, utilizing the same chassis components as the Series 1, with modified exterior body panels and trim details." It will enter production when the planned 500-unit production run of the Series 1 is completed. The company was previously granted NHTSA Temporary Exemption No. 99-1 from the automatic restraint provisions of Standard No. 208 for the Series 1, which expired on January 1, 2001 (64 FR 6736). Shelby had hoped to meet the standard by January 1, 2000, but anticipated sales did not materialize with the funds needed to sustain the air bag development project. In fact, only 256 of the planned 500 Series 1 vehicles had been sold as of the date of the petition. Since submitting its first petition in May 1998, Shelby stated that it has "spent an estimated total of 800 man-hours and \$150,000 related to the installation of a passenger and driver's side airbag system on the Series 1." Its efforts are now devoted to development of an advanced air bag system which it

hopes to implement at the end of 2005, well before September 1, 2006 when Standard No. 208 requires it to comply. The Series 1 is equipped with a three-point driver and passenger restraint system.

Based on quotations it has received, the "total projected cost for [a] subcontractor to develop a driver and passenger-side advanced airbag system for the Shelby Series 1 and 2 is \$6,005,000." The unaudited balance sheet of Shelby American, Inc., shows cumulative net losses exceeding \$23,000,000 for its last three fiscal years, almost \$6,000,000 of which are those of Shelby Series 1, Inc. for its most recent fiscal year.

Shelby stated that "without a temporary exemption, which will enable the company to generate funds through the sale of vehicles, Shelby American will not be able to sustain the airbag development program and will have to discontinue the Shelby Series 1 and 2 programs, causing substantial hardship to the company." For fiscal/calendar 2003, the company projects a net income exceeding \$15,000,000 if an exemption is granted, and a net loss of over \$6,000,000 if it is not.

The applicant argues that "the production of the Shelby Series 1 is in the best interest of the public and the U.S. economy." The company opened a new 100,000 square foot facility in June 1998 in Las Vegas to produce the Series 1, and has employed "up to 103 individuals" there. The car will be sold through select dealers " * * * providing employment to many sales and service personnel at the dealership level." Most major components are produced in the United States, including the engine (Oldsmobile), tires (Goodyear), and transmission (ZF, from RBT, a U.S. company). The Series 1 is technically advanced, combining "an aluminum chassis with a carbon-fiber body, a new concept amongst production vehicles, which provides strength and durability while minimizing weight." Shelby believes that the reduced weight achieved with this vehicle will translate into a new standard for improved emissions and fuel efficiency. Aside from Standard No. 208, the car will be certified as conforming to all applicable Federal motor vehicle safety standards.

Interested persons are invited to submit comments on the application described above. Comments should refer to the docket and notice number, and be submitted to: Docket Management, National Highway Traffic Safety Administration, room PL-401, 400 Seventh Street, SW., Washington, DC 20590. It is requested that two copies be submitted.

All comments received before the close of business on the comment closing date below will be considered, and will be available for examination in the docket at the above address both before and after that date, between the hours of 10 a.m. and 5 p.m. To the extent possible, comments filed after the closing date will also be considered. Notice of final action on the petition will be published in the **Federal Register** pursuant to the authority indicated below.

Comment closing date: March 5, 2003.

Authority: 49 U.S.C. 30113; delegations of authority at 49 CFR 1.50 and 501.4.

Issued on: January 27, 2003.

BILLING CODE 4910-59-P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA 2002-13357; Notice 2]

Uniroyal Goodrich Tire Manufacturing, Grant of Application for Decision That Noncompliance Is Inconsequential to Motor Vehicle Safety

Uniroyal Goodrich Tire Manufacturing (Uniroyal) has determined that a total 11,262 P155/80R 13 79S Uniroyal Tiger Paw AWP tires do not meet the labeling requirements mandated by Federal Motor Vehicle Safety Standard (FMVSS) No. 109, "New Pneumatic Tires."

Pursuant to 49 U.S.C. 30118(d) and 30120(h), Uniroyal has petitioned for a determination that this noncompliance is inconsequential to motor vehicle safety and has filed an appropriate report pursuant to 49 CFR Part 573, "Defect and Noncompliance Reports."

Notice of receipt of the application was published, with a 30-day comment period, on October 1, 2002, in the **Federal Register** (67 FR 61724). NHTSA received no comment on this application.

During the period of the 5th through the 48th weeks of 2000, the Woodburn, Indiana plant of Uniroyal Goodrich Tire Manufacturing produced and cured a total of 11,262 tires with erroneous marking. Of this total, no more than 3,796 may have been delivered to end-users. The remaining tires have been isolated in Uniroyal warehouses and will be brought into compliance.

FMVSS No. 109 (S4.3(e)) requires that each tire shall have permanently molded into or onto both sidewalls the

actual number of plies in the sidewall, and the actual number of plies in the tread area if different.

The noncompliance with S4.3(e) relates to the mold number. The tires were marked: SIDEWALL 2 Plies instead of the required marking of: SIDEWALL 1 Ply.

Uniroyal does not believe that this marking error will impact motor vehicle safety because the tires meet all applicable Federal Motor Vehicle Safety performance standards, and the noncompliance is one of labeling.

The Transportation Recall, Enhancement, Accountability, and Documentation (TREAD) Act (Pub. L. 106-414) required, among other things, that the agency initiate rulemaking to improve tire label information. In response, the agency published an Advance Notice of Proposed Rulemaking (ANPRM) in the **Federal Register** on December 1, 2000 (65 FR 75222). The agency received more than 20 comments on the tire labeling information required by 49 CFR Sections 571.109 and 119, Part 567, Part 574, and Part 575. With regard to the tire construction labeling requirements of FMVSS 109, S4.3(d) and (e), most commenters indicated that the information was of little or no safety value to consumers. However, according to the comments, when tires are processed for retreading or repairing, it is important for the retreader or repair technician to understand the make-up of the tires and the types of plies. This enables them to select the proper repair materials or procedures for retreading or repairing the tires. A steel cord radial tire can experience a circumferential or "zipper" rupture in the upper sidewall when it is operated underinflated or overloaded. If information regarding the number of plies and cord material is removed from the sidewall, technicians cannot determine if the tire has a steel cord sidewall ply. This information is critical when determining if the tire is a candidate for a zipper rupture. In this case, since the steel cord construction is properly identified on the sidewall, the technician will have sufficient notice.

In addition, the agency conducted a series of focus groups, as required by the TREAD Act, to examine consumer perceptions and understanding of tire labeling. Few of the focus group participants had knowledge of tire labeling beyond the tire brand name, tire size, and tire pressure.

Based on the information obtained from comments to the ANPRM and the consumer focus groups, we have concluded that it is likely that few consumers have been influenced by the tire construction information (number of

plies and cord material in the sidewall and tread plies) provided on the tire sidewall when deciding to buy a motor vehicle or tire.

The agency believes that the true measure of inconsequentiality to motor vehicle safety in this case is the effect of the noncompliance on the operational safety of vehicles on which these tires are mounted. This labeling noncompliance has no effect on the performance of the subject tires.

In consideration of the foregoing, NHTSA has decided that the applicant has met its burden of persuasion that the noncompliance is inconsequential to motor vehicle safety. Accordingly, its application is granted and the applicant is exempted from providing the notification of the noncompliance as required by 49 U.S.C. 30118, and from remedying the noncompliance, as required by 49 U.S.C. 30120.

Authority: (49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.50 and 501.8)

Research and Special Programs Administration

Pipeline Safety: Required Submission of Data to the National Pipeline Mapping System Under the Pipeline Safety Improvement Act of 2002

AGENCY: Research and Special Programs Administration (RSPA), DOT.

ACTION: Notice; issuance of advisory bulletin.

SUMMARY: The Office of Pipeline Safety (OPS) is issuing this advisory bulletin to owners and operators of natural gas transmission and hazardous liquid pipeline systems. The purpose of this bulletin is to advise pipeline operators of their responsibilities in complying with the Pipeline Safety Improvement Act of 2002. Specifically, this bulletin indicates the process for making new submissions of geospatial and operator contact information, updating previous submissions to the National Pipeline Mapping System (NPMS), and providing future submissions.
