Animal Plant and Health Inspection Service

Title: Black Stem Rust; Identification Requirements and Addition of Rust-Resistant Varieties.

OMB Control Number: 0579–0186.

Summary of Collection: Under the Plant Protection Act (7 U.S.C. 7701—*et seq.*), the Secretary of Agriculture is authorized to prohibit or restrict the importation, entry, or movement of plants and plant products to prevent the introduction of plant pests into the United States or their dissemination within the United States. Black stem rust is one of the most destructive plant diseases of small grains that are known to exist in the United States. The disease is caused by a fungus that reduces the quality and yield of infected wheat, oat, barley, and rye crops by robbing host plants of food and water. The fungus is spread from host to host by windborne spores.

Need and Use of the Information: APHIS will collect information to prevent the spread of black stem rust by providing for and requiring the accurate identification of rust-resistant varieties by inspectors. When a business request APHIS to add a variety to the list of rust-resistant barberries, it need to provide APHIS with a written description and color pictures that can be used by the State nursery inspectors to clearly identify the variety and distinguish it from other varieties. This action enables nurseries to move the species into and through protected areas and to propagate and sell the species in States or parts of States designated as protected areas.

Description of Respondents: Business or other for profit; State, Local, and Tribal Government.

Number of Respondents: 2.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 16.
